PROJECT DETAILS

Project name - BuildMapper

Description - This is web based service which is catering services to the construction industry for seamless building creation. Build-Mapper gives you up to date information on current local construction projects. Find the exact location, estimated stage of construction, contact information and more.

Tools & Technology - Angular, HTML, CSS, JavaScript, .Net, Github

My Roles and Responsibilities -
* Write clean, efficient, and maintainable code using React.js and related libraries.
* Implement responsive designs to ensure optimal viewing experiences across various devices and screen sizes.
* Implement routing and navigation using React Router for seamless user interaction and page transitions.

Project name - Kunnga

Description - Kunnga is property management platform, and it comprises two phases: the enterprise phase and the association phase. The Enterprise might be described as the admin, and they could manage all the duties and responsibilities of the admin, including adding users and managing plans, prices, and customers. Managing the customers and the properties is essentially the association's phase.

Tools & Technology - React, HTML, CSS, JavaScript, AWS

My Roles and Responsibilities -
* Develop user interfaces for web applications with a focus on performance, accessibility, and cross-browser compatibility.
* Create reusable and modular components to build scalable and flexible user interfaces.
* Manage component state and props effectively to maintain application state and data flow.

Project name - Tele-Health

Description - Eden is a helpful healthcare website where you can organize your medicine, make reports about your health, and order more medicine when needed. It's easy to use and helps you stay on top of your health.

Tools & Technology - React, HTML, CSS, JavaScript, GitHub

My Roles and Responsibilities -
* Integrate front end components with back-end APIs to fetch and display dynamic data.
* Collaborate with back-end developers to define API contracts and ensure smooth data exchange between the front-end and back-end layers.
* Handle asynchronous operations such as data fetching and state updates using asynchronous JavaScript techniques and libraries like Redux or React Context API.
* Maintain and update existing front-end code-base, refactor legacy code, and address technical debt to ensure code quality and scalability.

Project name - Its's Game Time

Description - Its gameTime is a social media platform for game lovers.

Tools & Technology - Angular , HTML, CSS, JavaScript, GitHub

My Roles and Responsibilities -
* Worked on creating the attractive UI.
* Worked on creating the responsive User interfaces compatible to mobile and desktop both.

Project name - JubWeMet

Description - This is basically Matrimonial website, there are two panels in this website. First one is Admin and second one is user panel. All the configurations are done from the Admin panel which gets reflects at the user website.

Tools & Technology - React & Angular, HTML, CSS, JavaScript, GitHub

My Roles and Responsibilities -
* Worked on creating the attractive UI.
* Worked on creating the responsive User interfaces compatible to mobile and desktop both.
