Projects

Bayley - Vehicle Tracking
Duration: March 2023 - Ongoing

Technologies:

- Flutter
- IOT
- Data Science
- Swift (Native IOS)
- Kotlin (Native Android)

Bayley (SmartLot) is a mobile Application for finding any vehicle and key with a quick search. This solution is for automotive. One can easily find service customers, sales inventory, and loaner keys/vehicles by using it. End users can View vehicles/keys located in service/sales/detail in real-time, and automated alerts when vehicles or keys move across the process of service or leave the selected geo-fence.

Roles and Responsibilities

- Understanding requirements of the customer
- Analyzed the functional specifications and helped team members to achieve test goals
- Preparing and execution of Test Cases
- Reporting of issues based on the priority and severity
- Performed QA testing based on project requirements
- Analyzed test results and worked with developers in bug fixes
- Performed regression testing and carried out bug fixes
- Monitored updates of existing and new changes as per the client requirement
- Multiple project handling

Sahas - Zich App
Duration: June 2023 - Ongoing

Technologies:

- iOS (Swift)
- Android (Kotlin)
- Backend (Node.JS)
- Database (MySQL)

Zich is a personal safety and networking app with a range of safety features designed to keep you safe in any situation. It has several unique features - you can send SOS Alerts using just a Voice Command or get a “fake phone call” whenever you need - a perfect exit strategy for uncomfortable situations. Users can coordinate with each other through Group Chat or Group Call, and easily plan a rescue.

Roles and Responsibilities

- Understanding requirements of the customer
- preparing and execution of Test Cases
- Reporting of issues based on the priority and severity
- Performed QA testing based on project requirements
- Analyzed test results and worked with developers in bug fixes
- Performed regression testing and carried out bug fixes

Starclusive
Duration: 1 Year
